

Chevron Lummus Global

## Media Release

---

### **Chevron Lummus Global's All-Hydroprocessing Route Chosen for Lubes Production**

In August 2010, Chevron Lummus Global (CLG) and Saudi Aramco Lubricating Oil Refining Company kicked off the basic design for a 23,000 BPSD lube oil plant comprised of all three units using CLG's all-hydroprocessing technology route: ISOCRACKING, ISODEWAXING and ISOFINISHING. The plant will have the flexibility to swing production between ultra-low sulfur group II and group III base oils and at the same time produce ULSD as a high value by-product. The basic design will be completed in spring of 2011.
