### **PDVSA Petróleo S.A. Selects Chevron Lummus Global's ISODEWAXING Technology For Amuay Refinery Project**

**Richmond, California, May 2013** – PDVSA Petróleo S.A. (PDVSA) has selected the ISODEWAXING and ISOFINISHING technologies of Chevron Lummus Global LLC (CLG) to produce high-quality lube base oils. PDVSA and CLG recently kicked off the Engineering Design for this 6,500 bpd unit to make several grades of API Group II lubricant base oils. This project is part of a larger PDVSA project to expand and improve capabilities at their Amuay Refinery, which is PDVSA's largest refinery and located in the Falcon state of western Venezuela. The anticipated startup date is estimated to be in 2019.

CLG will be partnering with PDVSA on this important project and supporting deployment through all the project phases: Design, FEED, EPC, Commissioning and Startup.

PDVSA's ability to meet the growing demands for premium lubricant base oils by implementing this state-of-the-art technology will fulfill its mission to deliver top quality products to Venezuela.

CLG is a 50-50 joint venture between Chevron Products Company, a wholly owned subsidiary of Chevron Corporation and CB&I's Technology operating group and is a leading licensor for hydroprocessing technologies.
