### **ALON's Paramount Petroleum Selects CLG ISOCRACKING and ISOTREATING Technologies for California Refinery**

ALON USA's Paramount Petroleum in Paramount, California has selected Chevron Lummus Global (CLG) hydroprocessing technologies as part of their previously announced hydrocracker project. The integrated unit will employ CLG's ISOCRACKING and ISOTREATING technologies to process 25,000 bpd vacuum gasoil and over 17,000 bpd of distillates respectively to meet California's stringent specifications. After completion of the design phase, CLG will provide technical support during all phases of the project including engineering design, start-up and commissioning.
