**Tatarstan's TANECO Selects CLG ISODEWAXING/ISOFINISHING Technologies for Nizhnekamsk Refinery**

**Russia's First All-Hydroprocessing Production of Group II/III Lubricant Base Oils**

Tatneft's TANECO Refinery in Nizhnekamsk, Tatarstan, Russian Federation is constructing a major grassroots refinery, including a world-scale hydrocracking complex as well as other heavy oil upgrading processes.

In addition to the heavy oil conversion, TANECO is implementing a production line for the manufacturing of high quality API Gp II/III lubricant base oils. TANECO will be the first refinery in Russia to produce base oils cleanly by the all-hydroprocessing route and without the need for any solvents.

Worldwide, CLG has been the lube base oil technology developer for the all-hydroprocessing scheme, which has become the new standard for the most economical manufacturing of high quality base oils. CLG has licensed many of these plants around the world, and is honored to be TANECO's partner.
